🔗 Professional Summary

- 6+ years building scalable web applications with React, Laravel, Node.js, and Python across cloud platforms (AWS, Google Cloud)
- I design high-performance RESTful APIs and architect CI/CD pipelines that accelerate delivery cycles
- I ship cross-platform desktop apps in Go and Rust for Windows and Linux, and TypeScript browser extensions (Chrome/Firefox, MV3)
- I build AI automations and agentic workflows that integrate LLMs into product and operations pipelines
- I drive organic traffic growth through technical SEO audits, structured data implementation, and Core Web Vitals optimization
- I build automated web scraping pipelines using Python, Playwright, and Puppeteer for large-scale data extraction
- I champion test-driven development and integrate AI-powered tools to enhance product intelligence and development velocity

🏢 Experience

Frontend Developer

ReProxy (Remote)

Aug 2025 – Dec 2025

- Spearheaded frontend development of a proxy management dashboard in Next.js 14, serving 500+ daily active users

- Engineered responsive, accessible UI components with Rizz UI, achieving WCAG 2.1 AA compliance across all breakpoints
- Streamlined client-side state architecture using Zustand, reducing re-renders by 40% and cutting session load times by 1.2s
- Shipped a companion Chrome/Firefox MV3 browser extension in TypeScript for one-click proxy switching and session telemetry
- Deployed frontend on AWS Amplify with automated preview builds, shortening PR review cycles by 50%
- Boosted Lighthouse performance scores to 90+ by applying code splitting, lazy loading, and image optimization
- Integrated real-time WebSocket connections, enabling live proxy status updates and reducing user-reported latency issues by 60%

Backend Developer

ReProxy (Remote)

Apr 2025 – Jul 2025

- Architected serverless microservices on Node.js and AWS Lambda, handling 300+ concurrent requests with 99.9% uptime
- Built a cross-platform Go daemon and CLI for Windows and Linux that managed local proxy rotation and synced with the cloud API
- Optimized PostgreSQL schemas and indexing strategies, accelerating query performance by 60%
- Delivered RESTful APIs with rate limiting and graceful error handling, supporting ~200K monthly API calls
- Deployed Sentry error tracking, cutting critical bug resolution time from 8 hours to under 2 hours
- Automated real-time proxy validation and health checks via AWS Lambda pipelines, eliminating 95% of manual QA effort
- Partnered with DevOps to establish CI/CD pipelines, slashing deployment time from 45 to 15 minutes

Backend Developer

FillyCoder (Remote)

Mar 2025 – Oct 2025

- Engineered scalable Laravel/MySQL backends for 4 client applications, supporting 2,000+ registered users
- Built LLM-powered AI automations for content generation and customer support triage, eliminating ~60% of manual response work

- Integrated real-time push notifications via Firebase and Laravel Reverb, increasing user engagement by 25%
- Orchestrated deployment pipelines on Render, achieving zero-downtime releases across production environments

Backend Developer

Walex Biz Nigeria (Onsite)

Nov 2024 – Mar 2025

- Accelerated API response times by 35% through query optimization and Redis caching in Laravel
- Halved database query execution time by refactoring N+1 queries and adding strategic indexes
- Secured 3 client applications with OAuth 2.0 authentication and payment gateway integrations

Shopify Developer

Freelance Contract

Jan 2025 – Feb 2025

- Transformed 5 Shopify storefronts using Liquid, React, and Tailwind CSS, driving a 20% increase in conversion rates
- Slashed page load times by 60% through image optimization, lazy loading, and code splitting
- Elevated SEO rankings and achieved WCAG 2.1 AA accessibility compliance across all client stores

IT Manager

GetFit Technologies

Mar 2023 – Oct 2024

- Directed a team of 4 engineers delivering Laravel and Next.js fitness tracking apps used by 1,500+ members
- Designed AI automations for personalized workout recommendations and habit-coaching nudges powered by LLM agents
- Automated marketing workflows via Firebase, Mailjet, and Airtable, eliminating 70% of manual data entry
- Pioneered Sentry monitoring adoption, reducing undetected production errors by 85%

Mid-Level Software Engineer

Epoh Music (Remote)

Feb 2022 – Feb 2024

- Designed RESTful APIs in Laravel and CakePHP powering a platform with 5,000+ active users
- Built a React music streaming dashboard with Firebase real-time sync, lifting user engagement by 30%
- Containerized services with Docker and established Cypress E2E testing, cutting production bugs by 45%

IT Manager

Andy Links Group

Sep 2020 – Feb 2022

- Oversaw full SDLC for 8+ projects, delivering on time and under budget across web and enterprise systems
- Modernized 3 legacy Java/C++ systems and 5 WordPress sites, cutting maintenance overhead by 30%
- Trained 15+ staff on development best practices, boosting team productivity by 25%

<> Selected Projects

Music Streaming Platform

Tech Stack: React, Laravel, Firebase, MySQL, Docker

- Delivered a full-stack streaming app supporting 5,000+ users with real-time playlist sync and analytics
- Layered in LLM-powered recommendation automations to personalize playlists and surface listening insights
- Optimized database queries to handle peak traffic loads, reducing average response time by 45%

E-commerce Storefront Optimization

Tech Stack: Shopify (Liquid), React, Tailwind CSS, REST APIs

- Achieved 60% faster page loads and WCAG 2.1 AA compliance across 5 Shopify storefronts
- Integrated third-party APIs for inventory and payments, reducing manual processing by 80%

Cloud-Based Fitness Tracking App

Tech Stack: Next.js, Laravel, AWS, Airtable, Mailjet

- Built a fitness platform with AI-powered coaching automations, growing the user base by 40% in 6 months
- Deployed on AWS with CI/CD pipelines, reducing manual deployment effort by 70%

Education

B.Sc. Computer Science

Federal University of Lafia
2015 – 2019

Certifications

Andela

Certificate of Completion
Oct 2023

Google Africa Developer Scholarship

Certificate of Participation
Nov 2022

freeCodeCamp

JavaScript Algorithms and Data Structures
Feb 2022

Skills

Frontend

React Vue.js Next.js TypeScript
Tailwind CSS Material UI Shopify (Liquid)
Figma WordPress Drupal
Browser Extensions (MV3)

Backend

Laravel Node.js Express.js PHP
Python FastAPI Django Go Rust

Cloud & DevOps

AWS Google Cloud Docker
CI/CD Pipelines Sentry Azure DevOps
